I. Demographic information

Table 1.1 Demographics for Bourbon County, Kentucky vs. KY & USA

	Bourbon			
	County	Kentucky	USA	Source
			321,418,8	
Population	20,320	4,436,957	20	1
% Female	50.60%	50.80%	50.80%	3
% Male	49.40%	49.20%	49.20%	3
% 65 years and Over	18.20%	15.60%	15.20%	1
% White	91.10%	88.10%	77.10%	1
% Black	6.30%	8.30%	13.30%	1
% Hispanic or Latino	7.00%	3.40%	17.60%	1
Homeownership Rate	61.90%	67.20%	63.90%	1
Median Household				
Income	\$46,370	\$45,178	\$55,775	1
High School Graduation	91.40%	88.60%	81.00%	5

Bourbon County is located just north of Fayette County. A local board of health oversees the activities of the local health department. The service area for the Bourbon County Health Department is 292 sq. miles. Approximately 91.10% of the population is white, 6.30% is black, and 7.0% is Hispanic or Latino. The largest employer for the community is Central Motor Wheel of America (CMWA). Bourbon County has one community hospital which maintains 58 beds, including a Behavioral Health Unit. Our area medical professionals consist of 30 physicians, 11 pharmacists, and 10 dentists. Medicaid serves 19.0% of Bourbon County's population. Table 2.1 is an excerpt from the Bourbon County Community Health Assessment Profile. The entire profile can be found at the end of this document labeled Appendix A.

II. Health Issues

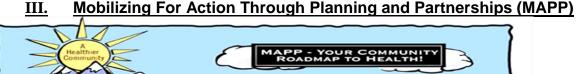

Bourbon County shares many of the poor health outcomes of which the state of Kentucky is known.

Table 2.1 Behavioral health issues for Bourbon County, Kentucky vs. KY & USA

	Bourbon			
	County	Kentucky	USA	Source
Unemployment Rate	5.70%	4.80%	4.80%	3
Binge Drinking (% Adults)	15.00%	13.00%	25.40%	2,9
Drug Arrests (Per 100,000 population)	1,706	1,046	700	13
Violent Crime Offenses				
(Per 100,000 population)	454.1	267	469	2
Recommended Fruit and				
Vegetable Intake (% Adults)	23.40%	10.90%	-	2,3
Lack of Physical Activity (% Adults)	44.80%	30.20%	25.40%	2
Prevalence of Smoking (% Adults)	34.60%	25.90%	15.10%	13
Prevalence of Obesity (% Adults)	30.10%	33%	36.50%	3
Prevalence of Overweight (% Adults)	68.00%	67.00%	68.80%	3

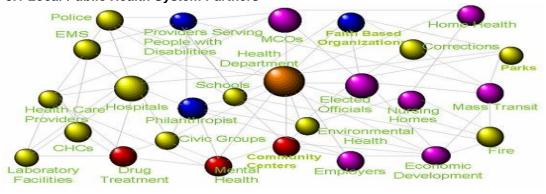

One can see that while Bourbon County isn't that far out of line with the state of Kentucky, we fall well behind the rates for the United States. A few alarming statistics are lack of physical activity, drug arrests, and violent crime offenses. The last few statistics are almost surely related as the use of alcohol and drugs is a common factor in violent crime offenses.

Other contributing causes for these health factors are food deserts in the towns of Millersburg and North Middletown. The only true grocery stores are located in Paris; the other communities have local corner stores that stock mainly packaged foods and prepare lunchmeat sandwiches for patrons.

Mobilizing for Action through Planning and Partnerships or MAPP is a tool that was used in Bourbon County. Through this tool, communities are empowered to improve their health through collaborative strategic planning. This process also allows a community to understand how to better use their strengths to overcome their own unique challenges. MAPP consists of four separate Assessments: the Community Themes and Strengths Assessment, the Local Public Health System Assessment, the Forces of Change Assessment, and the Community Health Status Assessment. Each of these assessments is responsible for a new perspective on the community's challenges and strengths. This process enables communities to make positive changes that lead to better overall health outcomes for the entire community through setting achievable and measurable goals.

Our MAPP team was led by facilitators from the University of Kentucky in an asset mapping exercise to determine who does what within our local public health system (LPHS). This exercise went rather quickly as BCHD has frequent meeting with community partners to let them know that they all fit within the public health system.

Community Themes and Strengths Assessment

This assessment is designed to gain insight on the community's perceptions about the quality of life in their community. The survey tool that was used to gain this data is attached in the appendix (Appendix B). These surveys were distributed to many locations including the library; medical offices, daycares, the YMCA, a fitness facility, the local hospital, and they were sent home with elementary children from school. The surveys were also obtained in person at the schools, the county fair, the city municipal building on several occasions, and two separate health fairs. Results were also collected through the health department's website. Over a 3-month collection period, 385 people responded to the survey. The results of these surveys are listed below.

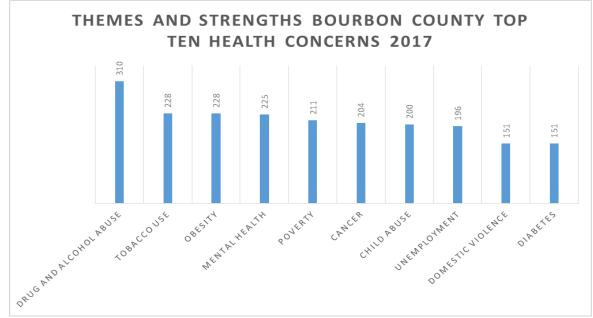

Table 3.1 Top 10 Health issues identified by Bourbon County residents

In addition to the personal perspective from residents, we gathered an organizational perspective from our MAPP stakeholders by asking them what they thought were strengths that contributed to good health and risks that contributed to poor health. Their responses are in Table 4.2 below

Table 3.2 MAPP team themes and strengths assessment

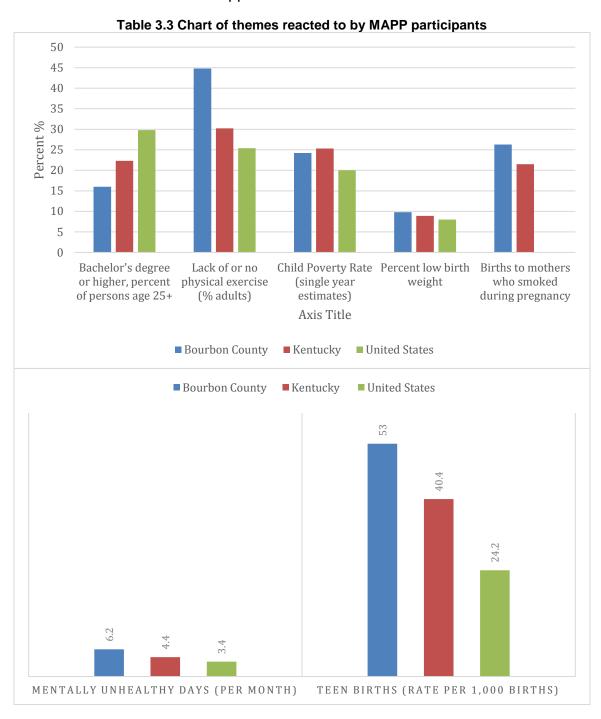

Strengths School partnerships-open to health programming Inpatient mental health services Community resources like the YMCA, library, BCHD, extension, and BCH Natural resources Faith based community Access to Lexington and surrounding communities Risks Opposing policy views Apathy and afraid of change Faulty leadership Affordable and availability of housing Younger parenting groups/grandparents parenting

Community Health Status Assessment

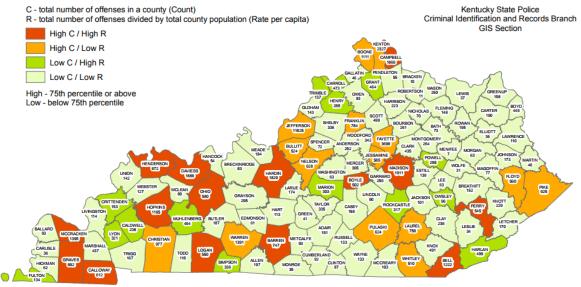

Our MAPP team of community stakeholders was presented with a packet of data that had been collected from multiple sources. They were asked to review the data and report of some of the themes that stood out to them. The one positive result from the data was that our tooth loss rate was significantly lower (15.40%) than the state of Kentucky rate. The concerns of the group were: high teen birth rate, high child poverty, mentally unhealthy days, low birth weight babies, moms who smoke during pregnancy, lack of exercise and low college education rates.

As table 3.3 below shows, our lack of and no exercise rates are much higher than Kentucky and national averages, our teen birth and mothers that smoke during pregnancy rate even outpace the state of Kentucky. Table 3.4 address the drug arrest

and crime issue that was also a huge concern of residents and our MAPP team. A full table of the data can be seen in Appendix A.

Year 2016 Drug / Narcotic Offenses by County

Forces of Change Assessment

The Forces of Change assessment was completed by our MAPP team of community stakeholders. The group was asked what is occurring or might occur that positively and/or negatively affects the health of our community.

Table 3.5 Forces of Change Assessment Results

Assortment of community events
Locally sourced food resources
Strong cultural history
Smoke free school campuses and
government buildings
Collaboration among community
organizations
New leaderships

Younger generation doesn't have to work or doesn't want to work
Reimbursement of health services and competitive pay
Strong cultural history/unwilling to change Roadway safety concerns Infrastructure is crumbling
Younger parenting group/grandparents raising kids

Priority Health and Safety Issues

Two main issues seemed to resonate with both the public and our community partners: **substance abuse/mental health and obesity**. These issues were addressed at length in MAPP group subcommittees and the plan to address them is below. These issues will also be addressed in the Bourbon County Health Department strategic plan. according to plan.

V. Conclusion

This CHA was developed through hard work by multiple partners. It was encouraging to see the community come together to discuss health and ways we can make a difference in Bourbon County. Everyone seemed to buy-in to the process and if nothing else, really understood how they fit in the public health system.
